

SOLANA DEVNET • LIVE MVP

SolGig

A marketplace where creators sell files and services for SOL, and where an AI agent can find, buy and receive a product through one endpoint without a person clicking anything.

THE PROBLEM

Selling a small digital thing online still costs too much and pays too slowly.

30 %

Platform cut

App stores and creator platforms routinely keep 10 to 30 percent of each sale.

7-30 d

Payout delay

Creators wait on payout schedules and minimum balances before they see a cent.

0

Agent checkout

AI agents can browse the web but cannot pass a card form. No marketplace is built for them to pay.

List it, post it, get paid in the same block.

Digital goods, paid directly

The buyer signs one transaction that pays the seller and a 2.5 % fee to the treasury. The server reads it back from the chain before it unlocks the file.

Services, held in escrow

Service payments sit in an escrow wallet until the buyer confirms delivery, then the server signs the payout to the seller.

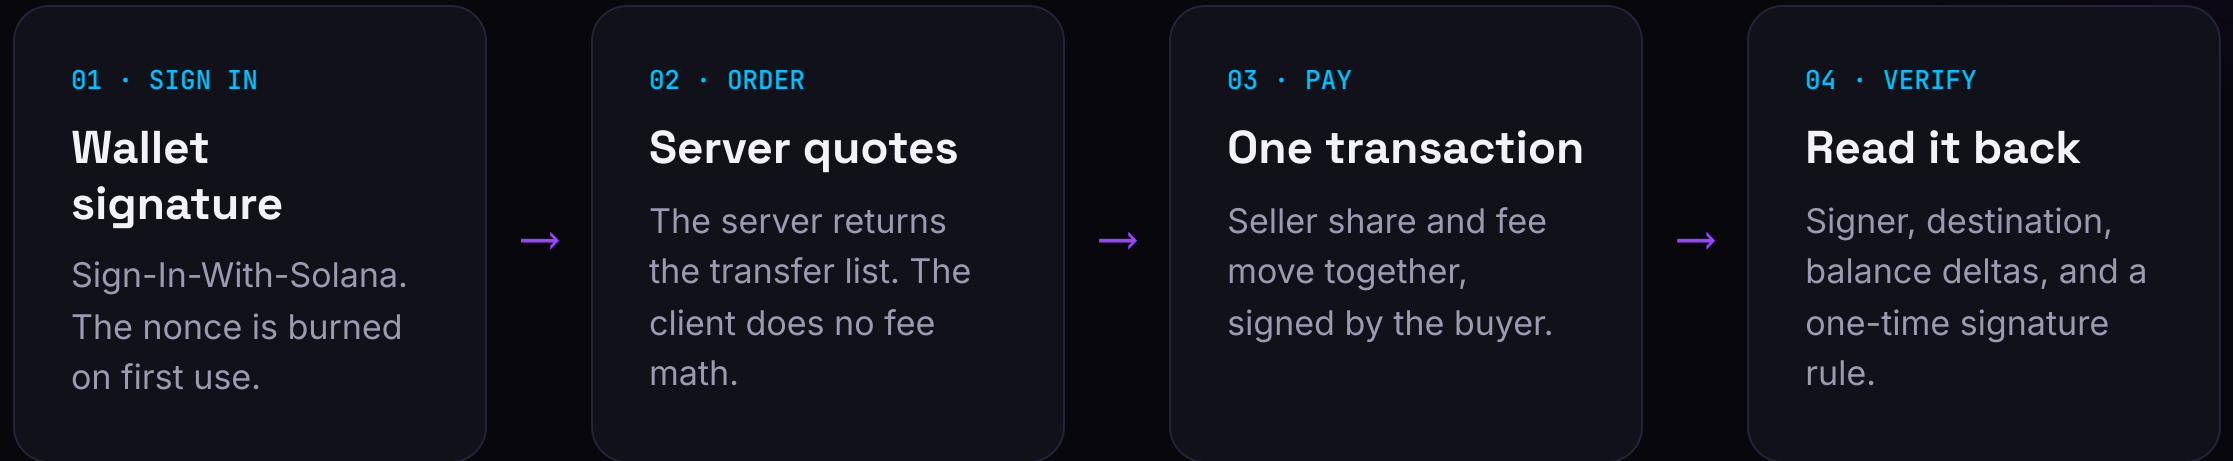

A feed that sells

Posts, comments, likes and follows sit next to the listings, so a creator's audience and their shop are the same page.

A catalog agents can use

`/api/products` returns prices and the exact transfers to make. An agent can pay and verify without scraping a page.

Every step can be checked on the chain.

Three paid orders, finalized on devnet.

Signature	Amount	Status
4Sp81mdZg2mDGdQQGQP75yeqboKhy2TXmwHPRQ1RruycXHt9vXuGRpRRPNrvHAfCnYHGcYnEvSspU5cyK8GNcbFh	0.4 SOL	finalized
2VzLTr6m6hsY96HLvG8mqWdyZQbSXDZnn5y2gg3d5ffKSAXXSXxLGaGc81UsfxjA5kkJWLCAJwMLeKZbugaLiBCm	0.4 SOL	finalized
3DbD4FrZJ1QVR9ukXMejphuemBHcvK5rYjQvEsLhJxHJEz9Qw5TstSjxSVEJHTbZh6qvojauT9zdR9rgwkjU1d2E	0.4 SOL	finalized

Checked with `getSignatureStatuses` against `api.devnet.solana.com` on 16 September 2026.
Each one is viewable at `explorer.solana.com` with `?cluster=devnet`.

Compared with what people use today.

	Gumroad	Fiverr	Crypto pay links	SolGig
Fee on a sale	10 %	20 % + buyer fee	~1 %	2.5 %
Seller paid	Weekly	After clearance	Instant	Same transaction
Escrow for services	No	Yes	No	Yes, on-chain payout
Social feed	No	No	No	Yes
Built for agent buyers	No	No	Partly	Yes

A flat fee on every sale, taken inside the payment.

2.5 %

Take rate

Set in basis points and applied by the server, so the fee cannot be edited on the client.

\$0

Collection cost

The fee lands in the treasury in the same transaction. There is no invoicing and no card processor.

Next

Promoted listings

Paid placement in the feed and the agent catalog, priced in SOL.

BUILT SO FAR

What exists today, not what is planned.

21

API routes

10

Pages, English and
Indonesian

20

Motion components plus
a Three.js coin orbit

3

Recorded audit rounds
with fixes

Stack. Next.js 15, React 19, TypeScript, Neon Postgres, @solana/web3.js, wallet adapter.

Safety. Replay guard on signatures, payout lock against double release, per-route rate limits, a boot check that stops devnet and mainnet settings from mixing.

NEXT 90 DAYS

From a working MVP to a program-owned escrow.

Month 1. Move escrow from a server wallet to an Anchor program so no one at SolGig can hold funds.

Month 2. USDC pricing next to SOL, and an SDK so agent frameworks can buy in a few lines.

Month 3. Mainnet launch with twenty invited creators, and promoted listings turned on.

TRY IT

Pay a creator in one signature.
